**"I gathered all vaccine ingredients into a list and contacted Poison Control. After intros and such, and asking to speak with someone tenured and knowledgeable, this is the gist of that conversation.**

Me: My question to you is how are these ingredients categorized? As benign or poison? (I ran a few ingredients, formaldehyde, Tween 80, mercury, aluminum, phenoxyethanol, potassium phosphate, sodium phosphate, sorbitol, etc.)

He: Well, that's quite a list... But I'd have to easily say that they're all toxic to humans... Used in fertilizers... Pesticides... To stop the heart... To preserve a dead body... They're registered with us in different categories, but pretty much poisons. Why?

Me: If I were deliberately to feed or inject my child with these ingredients often, as a schedule, obviously I'd put my daughter in harm's way... But what would legally happen to me?

He: Odd question... But you'd likely be charged with criminal negligence... perhaps with the intent to kill... and of course child abuse... Your child would be taken away from

you... Do you know of someone who's doing this to their child? This is criminal...

Me: An industry... These are the ingredients used in vaccines... With binding agents to make sure the body won't flush these out... To keep the antibody levels up indefinitely...

He: WHAT?!

The man was beside himself. He asked if I would email him all this information. He wanted to share it with his adult kids who are parents. He was horrified and felt awful he didn't know... his kids are vaccinated and they have health issues..."

*~ Iris Figueroa*

**You CANNOT make an educated decision without being educated.**

Here are just SOME vaccine ingredients.

**These are being INJECTED into your kids:**

*Formaldehyde/Formalin - Highly toxic systematic poison and carcinogen.*

*Betapropiolactone - Toxic chemical and carcinogen. May cause death/permanant injury after very short exposure to small quantities. Corrosive chemical.*

*Hexadecyltrimethylammonium bromide - May cause damage to the liver, cardiovascular system, and central nervous system. May cause reproductive effects and birth defects.*

*Aluminum hydroxide, aluminum phosphate, and aluminum salts - Neurotoxin. Carries risk for long term brain inflammation/swelling, neurological disorders, autoimmune disease, Alzheimer's, dementia, and autism. It penetrates the brain where it persists indefinitely.*

*Thimerosal (mercury) - Neurotoxin. Induces cellular damage, reduces oxidation-reduction activity, cellular degeneration, and cell death. Linked to neurological disorders, Alzheimer's, dementia, and autism.*

*Polysorbate 80 & 20 - Trespasses the Blood-Brain Barrier and carries with it aluminum, thimerosal, and viruses; allowing it to enter the brain.*

*Glutaraldehyde - Toxic chemical used as a disinfectant for heat sensitive medical equipment.*

*Fetal Bovine Serum - Harvested from bovine (cow) fetuses taken from pregnant cows before slaughter.*

*Human Diploid Fibroblast Cells - aborted fetal cells. Foreign DNA has the ability to interact with our own.*

*African Green Monkey Kidney Cells - Can carry the SV-40 cancer-causing virus that has already tainted about 30 million Americans.*

*Acetone - Can cause kidney, liver, and nerve damage.*

*E.Coli - Yes, you read that right.*

*DNA from porcine (pig) Circovirus type-1*

*Human embryonic lung cell cultures (from aborted fetuses)*

You can view all of these ingredients on the CDC's website. I encourage everyone to do their own research. Look up the MSDS on these chemicals. Read the thousands of peer-reviewed studies that have evaluated the biological consequences these chemicals can have on the body, especially when being injected.

## Appendix B

### Vaccine Excipient Summary

#### Excipients Included in U.S. Vaccines, by Vaccine

In addition to weakened or killed disease antigens (such as weakened, killed, or parts of viruses or bacteria), vaccines contain very small amounts of other ingredients – excipients.

Some excipients are added to a vaccine for a specific purpose. These include:

- **Preservatives**, to prevent contamination. For example, thimerosal.
- **Adjuvants**, to help stimulate a stronger immune response. For example, aluminum salts.
- **Stabilizers**, to keep the vaccine potent during transportation and storage. For example, sugars or gelatin.

Others are residual trace amounts of materials that were used during the manufacturing process and removed. These can include:

- **Cell culture materials**, used to grow the vaccine antigens. For example, egg protein, various culture media.
- **Inactivating ingredients**, used to kill viruses or inactivate toxins. For example, formaldehyde.
- **Antibiotics**, used to prevent contamination by bacteria. For example, neomycin.

The following table lists substances, other than active ingredients (i.e., antigens), shown in the manufacturers' package insert (PI) as being contained in the final formulation of each vaccine. **Substances used in the manufacture of a vaccine but not listed as contained in the final product (e.g., culture media) can be found in each PI, but are not shown on this table.** Each PI, which can be found on the FDA's website (see below) contains a description of that vaccine's manufacturing process, including the amount and purpose of each substance. In most PIs, this information is found in Section 11: "Description." Please refer to the PI for a complete list of ingredients or excipients. A table listing vaccine excipients and media by excipient is published by the Institute for Vaccine Safety at Johns Hopkins University, and can be found at http://www.vaccinesafety.edu/components-Excipients.htm.

Childhood and the bioweapon technology - all for a purpose beyond disabling or eliminating populations. WBAN, EMF interactions, the use of nanotechnology to better target assets for control or eliminations, etc.

I heard vaccines are a $50B per year industry, but the big money is treating all the injuries they cause. That is said to be a $500B per year industry. They treat us like animals.
